Start Free Trial Upgrade Alteryx A New Approach to Analytics Get ready to unlock hidden insights in your data. Showing 1 - 5 of 84 reviews

Massive time saving on Analytical function as well as improvement in accuracy with data from disparate data sources Ease of implementation, fantastic product support. Great assistance from Alteryx - committed resources at no cost to help implement, train etc. A lot of willingness to help us 'prove' the business case - i.e. make a success of the pilot project. Workshops ran in business helped getting a number of other business functions exposed and on board in support of the product. Willingness to negotiate on price as well as providing trial licences to other functions for a period of time to enable usage uptake. Willingness to understand business problem assisted greatly in successful deployment. Ease of deployment in 'non-analytics' environment was a big enabler. What is great is that it is process flow based and no extensive coding experience is required. Now busy with further business case projects in other parts of the business. The cost initially seems exorbitant - especially as there are alternatives such as KNIME & Rapid Miner. Value delivered however overcame this barrier.

1. Overall experience is very good as people in our organization are using this for their day to day activities.
2. It is very easy to use and overall learning curve is very less.
3. The menus and process are very self explanatory.
1. Variety in built processes which helps to transform raw data into more readable formats.
2. Best option for the visual analysts as it provides in depth analysis.
3. Having very easy installation process 4. Powerful analytics product available in market which takes the raw input files and allows analysts to apply multiple processes on it which helps the analysts to prepare valuable information from raw data.
1. Cost of this application is too high as compared to the other alternative projects.
2. Integration with other tools sometimes a big challenge.
3. Dashboard needs an improvement as compared to other products.
4. Consumes more memory and CPU
5. Enhancement required in order to smoothen the integration of python.

1. Easy to use product 2. Initial setup is very simple. 3. Much more options available for data analysis

1. Easy to use product 2. Initial setup is very simple. 3. Much more options available for data analysis Alteryx seems to have ever-expanding capabilities. Some of the error messages can be quite vague and help very little in troubleshooting. It has a lot of out-of-the-box integrations with pretty much any data source you can imagine. It connects flawlessly with on-prem and SaaS sources as well. The designer UI is very easy to work with. Drag and drop functionality makes it convenient for non-programmer/business users, while scripting support allows for powerful transformations and data processing. Additionally, data prepping/cleaning, ETL operations, visualization, etc. are super easy to learn and implement. Also, there is a big user community that makes finding help and support easy. This is an expensive product. Even at the enterprise level, it's a significant cost, so you need to think about the trade-offs before committing to it. It can be slow sometimes if other users are running resource-intensive tasks. You may have to wait for others to complete their tasks or add more resources, which again can be costly. Storage options are also lacking especially cloud-based ones. Although, the vendor is considering support for this in the future releases. I'm a Technology Consultant, using Alteryx for ETL projects where analyse the data is a critical job and the size of the data, wouldn't allow me to use tools like excel. Alteryx it has been a great tool for all my jobs, let in me stand out with fast and quality solution. The most I like is the Easy drag and drop function that the application has. The design and how visual it is to keep the Information flow, makes Alteryx a great app for data analysis, formatting and design. Built in tool like time Formatters, filters and Joins facilitate the work of doing data cleansing and data prepping for any ETL job. Another great area is how flexible it is input and output formats. It lets you join CSV files with XLS or even TXT. The least I like is the price and the latency when loading the data. Because is a strong and powerful Tool, it is a bit pricey in one hand, is not a tool for one day job, is more for enterprise and daily jobs. When loading the data, depending where is located the document, it will take longer than usual. Because Excel is not robust enough and the data size, require me to search for another tool that can handle it. Over the last several months the data geeks here at Arkatechture have been getting to know Alteryx, a data tool that is designed from the ground up to empower business users in the world of big data. What exactly does that mean? Depending on who you ask, you will likely get a different answer. For me, Alteryx is all about data acquisition and enrichment; however, others may place more value on its predictive modeling, geospatial, or application development tools. So what is Alteryx? Let's take a closer look. Alteryx's core product is its workflow designer. The Alteryx Designer allows users to quickly prepare, blend, conform, and analyze data from almost any source, including flat files, database connections, API's, salesforce.com and much more. All of this is accomplished using a visual workflow designer that is surprisingly intuitive and requires no code. Workflows are built using a combination of prebuilt or custom "tools". Tools represent units of functionality such as data input, data output, aggregation, filtering, sampling, reporting, geocoding... the list goes on. While workflows can become large in size, they are essentially just a series of connected tools. One especially cool feature of Alteryx is that any user-built workflow can be saved as a tool and used again inside other workflows. Alteryx refers to these custom tools as "macros", which allow for a tremendous amount of customization and re-usability of your work. While the business applications are endless, here at Arkatechture, we've created several fun macros, like the one we use to pull data from the FitBit API. Now that you have all of these awesome workflows, tools, and macros- what's next? Alteryx Server! Alteryx Server provides a gallery for users to share their work, a scheduling engine to automate data loads, version control and master data management features, and it even allows non Alteryx users to join the fun by enabling users to execute workflows and analytic apps directly from their web browser! To sum it all up, Alteryx Designer is how you build your applications, and Alteryx Server is how you share and scale them. Additionally, Alteryx has a bunch of other great features that should not go unnoticed, like R analytics, enrichment data sets, and it's amazing community. Speaking of community, if Alteryx sounds like your kind of thing- we'd love for you to join the Portland, ME Alteryx User Group!
